5. Order on subsidies for energy improvements in buildings for year-round residence

6. Products and materials that are part of energy savings and energy efficiency projects in buildings for year-round residence, for which grants are obtained through the scheme.

Energy improvement projects may consist of one or more specified energy improvement measures

7.

8. The Order shall apply to subsidies for the implementation of energy improvement projects in buildings for year-round residence to achieve energy savings and energy efficiency improvements, as well as reductions in the use of fossil fuels related thereto.

9. The assessment by the Danish Energy Agency is that the scheme contains such technical regulations as defined in the Directive, as it stipulates both characteristics of products that will be eligible for subsidies (technical specifications) and requirements regarding the use of products, which will have a significant impact on sales of the products (second requirement) (see Article 1(1)(c) and (d)).

In the assessment the emphasis has been placed on the fact that subsidies under the scheme for conversion to heat pumps will be limited to heat pumps that have a better energy efficiency than the minimum standard.

Since the regulation constitutes a financial incentive (subsidy), it is the Danish Energy Agency's assessment that there is only actual compliance (as opposed to legal compliance where there is a requirement relating to the marketing or use of the products concerned). In the opinion of the Danish Energy Agency, this means that the exemption from the requirement for a standstill period applies, which in turn means that, following notification, there is no requirement to postpone entry into force of the Order.

POINT 10
