5. Order on subsidies for conversions to heat pumps in buildings for year-round residence

6. Products and materials which will be included in the implementation of projects for the conversion of heating systems in buildings for year-round residence in order to achieve energy savings and energy efficiency improvements as well as reductions in the use of fossil fuels

7.

8. The Order shall apply to subsidies for the implementation of projects for the conversion of heating systems in buildings for year-round residence in order to achieve energy savings and energy efficiency improvements as well as reductions in the use of fossil fuels in connection with this.

Subsidies may be awarded through the subsidy scheme upon application by private building owners and companies. The projects eligible for subsidies are limited to measures concerning the conversion of the heat source of buildings to a heat pump.

9. The assessment by the Danish Energy Agency is that the scheme contains technical regulations as defined in the Directive, as it stipulates both characteristics of products that will be eligible for subsidies (technical specifications) and requirements regarding the use of products, which will have a significant impact on sales of the products (second requirement) (see Article 1(1)(c) and (d)).

In the assessment, emphasis has been placed on the fact that subsidies through the scheme for conversion to heat pumps are limited to heat pumps that have a better energy efficiency than the minimum standard.

Since the regulation constitutes a financial incentive (subsidy), it is the Danish Energy Agency's assessment that there is only actual compliance (as opposed to legal compliance where there is a requirement relating to the marketing or use of the products concerned). In the opinion of the Danish Energy Agency, this means that the exemption from the requirement for a standstill period applies, which in turn means that, following notification, there is no requirement to postpone entry into force of the Order.

POINT 10

References to the basic act

Act on the promotion of efficient energy use and greenhouse gas reduction, cf. Consolidation Act No 296 of 17 March 2023, as amended by Act No 1555 of 12 December 2023, now updated to the applicable version: Consolidation Act No 1036 of 12 September 2024 on the promotion of efficient energy use and greenhouse gas reduction

POINT 15 impact assessment or specify

The amendment of the subsidy scheme, which in the future concerns subsidies to private building owners and companies for the implementation of projects for the conversion to heat pumps in buildings for year-round residence, where the main use of the building in accordance with the Order on updating the Central Register of Buildings and Dwellings (BBR) is registered as a year-round residence, will not have a

direct impact on trade and industry.
