4. 2025/0741/DE - B20 - Safety

5. Model Guideline on building authority requirements for schools (Model School Building Guideline – MSchulbauR) – Version as of 09.09.2025

6. Construction products insofar as they are used for the construction of and in general and vocational schools in accordance with the scope of the notified legislation

7.

8. The notified legislation is a further development of the previous version from 2009 (see 2009/0450/D). The scope of application includes general and vocational schools in which children and young people are taught. As before, educational institutions for adults do not fall within the scope of the Model School Building Guideline. The notified legislation specifies building control requirements for components, escape routes, stairs, railings and barriers, smoke extraction, lightning protection systems, safety lighting, alarm systems and internal fire alarm systems, emergency power supply and fire brigade plans in schools in accordance with the scope of application, with the protection goal of preventive fire protection and hazard prevention.

9. Due to the further development of educational concepts, schools increasingly require open and flexible use of space, which deviates significantly from the norm that previously formed the basis of the previous version of the notified legislation.

Therefore, the notified legislation was expanded to include 'learning areas' that are suitable as common rooms as well as for learning and teaching and that can be both spatially separated and open-plan structures.

The Model School Building Guideline thus shows a basic way of enabling the construction of modern new school buildings.

In addition, the notified legislation includes clarifications, amendments or facilitations for school types from the previous version of this Model Guideline.

Notification is carried out on behalf of the 16 Federal States of the Federal Republic of Germany.
