5. Order on subsidies for conversions to heat pumps in year-round residences

6. Products and materials to be included in the implementation of projects on the conversion of heating systems in buildings for year-round housing in order to achieve energy savings and energy efficiency improvements, as well as reductions in the use of fossil fuels

7.

8. The order applies to subsidies for the implementation of projects for the conversion of heating systems in buildings for year-round residence in order to achieve energy savings and energy efficiency improvements as well as reductions in the use of fossil fuels in connection with this.

Subsidies may be awarded through the subsidy scheme upon application by private building owners and companies. The projects eligible for subsidies are limited to measures concerning the conversion of the heat source of buildings to a heat pump.

9. The assessment by the Danish Energy Agency is that the scheme contains technical regulations as defined in the Directive, as it stipulates both characteristics of products that will be eligible for subsidies (technical specifications) and requirements regarding the use of products, which will have a significant impact on sales of the products (second requirement) (see Article 1(1)(c) and (d)).

In the assessment, emphasis has been placed on the fact that subsidies through the scheme for conversion to heat pumps are limited to heat pumps that have a better energy efficiency than the minimum standard.

Since the regulation constitutes a financial incentive (subsidy), it is the Danish Energy Agency's assessment that there is only actual compliance (as opposed to legal compliance where there is a requirement relating to the marketing or use of the products concerned). In the opinion of the Danish Energy Agency, this means that the exemption from the requirement for a standstill period applies, which in turn means that, following notification, there is no requirement to postpone entry into force of the order.
