4. 2025/9001/NO - X40M - Labelling and advertising

5. Draft Regulations on standardised electronic cigarettes and refill containers

6. Electronic cigarettes and refill containers.

7.

8. The proposal includes a new Regulations on standardised packaging for e-cigarettes and refill containers, both with and without nicotine.

Standardised packaging refers to uniform design and labeling of all packages. Thus, the use of manufacturers' own logos, trademarks, symbols, images, colors, or other forms of advertising will not be allowed. Standardisation means that the packages will be a single color, and the application of brand and variant names, as well as producer information, should follow standardized color, placement, font, and size. The proposal also includes regulations on the colour of e-cigarettes, the design of refill containers, the colour of e-liquid and certain other elements, such as barcodes and packaging material.

The proposal is based on the existing Norwegian regulations for standardised tobacco products, as well as the regulations of standardised e-cigarettes in Denmark and Finland.

9. Tobacco smoking is the leading single cause of illness and premature death in Norway. The use of e-cigarettes also poses risks for serious health damage. Children and young people are particularly vulnerable to the harmful effects of tobacco products and other nicotine products. With this proposal of new regulations on standardised electronic cigarettes and refill containers, the Ministry aims to reduce children's access to e-cigarettes and refill containers, and by this protecting public health.

The Norwegian Tobacco Control Act includes a long-term goal for a tobacco-free society. It is also a goal in the government's tobacco control strategy to achieve a tobacco and nicotine free generation. A WHO report from 2019 recommends that countries introduce measures to hinder the uptake of e-cigarettes among young people, including regulations such as flavour ban and standardised packaging.

Further grounds are included in the attached Impact assessment.
