5. Decision by the Minister for Agriculture, Fisheries, Food Security and Nature designating the Renugarant certification scheme as a certification scheme within the meaning of Article 35n(1) of the Fertilisers Act Implementation Regulations

6. Renure

7.

8. Article 1 of the Designation Order may contain technical requirements. Article 35a of the Fertilisers Act Implementation Regulations stipulates that Renure may be used in excess of 170 kg N/ha/year of animal manure only if the producer is registered or if the producer has a certificate issued under a certification scheme designated by the Minister for Agriculture, Fisheries, Food Security and Nature.

Pursuant to Article 35n of the Fertiliser Act Implementation Regulations, this decision designates a certification scheme. The certification scheme to be designated sets requirements for the equipment used to produce Renure. Requirements are also laid down for the sampling and the frequency thereof as well as the analysis of the Renure, both in terms of content and frequency.

A mutual recognition provision is not necessary because producers of Renure based outside the Netherlands may also participate in the certification scheme, and the Renure they produce under certification may be used in the Netherlands at rates exceeding 170 kg N/ha/year.

The amendment to the Fertiliser Act Implementation Regulations, which permits the use of Renure in quantities exceeding 170 kg N/ha/year, has already been notified (reference 2026/0074.NL).

9. The technical requirements included in the draft decision are non-discriminatory, necessary and proportionate.

The technical requirements apply first and foremost to all producers of Renure and to all equipment used to produce Renure and are therefore non-discriminatory.

The requirements are also necessary and proportionate. First of all, the requirements are laid down in order to comply with the conditions laid down in the Nitrates Directive regarding the use of Renure. To this extent, it concerns implementing legislation.

The compelling reason of general interest for including the technical requirements in the regulation is protection of the environment. The importance of protecting the environment and water in particular requires that the Renure produced must always meet quality standards and that the use of animal manure must always be justified. The technical regulations in the regulations provide for this, do not go beyond what is necessary and are proportionate in light of environmental interests.

9a. The requirements are appropriate to protect environmental interests. The designation of the certification scheme ensures that the Renure produced always meets the prescribed quality requirements and that the use of animal manure can always be justified.

9b. The requirements set out in the certification scheme to be designated are necessary in order to meet, and continue to meet, the requirements imposed on Renure by the Nitrates Directive, so as to be able to justify the use of animal manure.

9c. The requirements are proportionate. The requirements set out in the scheme to be designated are intended to prevent pollution of groundwater and surface water. The requirement is necessary for an overriding reason relating to the public interest, namely protecting the environment.
