4. 2025/0794/HR - B00 - CONSTRUCTION

5. Technical regulation for pavement structures with concrete pavement

6. Technical requirements for pavement structures with concrete pavement.

7.

8. The technical regulation for pavement structures with concrete pavement, within the framework of fulfilling the basic requirements for a structure intended for road traffic in motion and at rest, lays down the technical properties for a pavement structure with concrete pavement as part of a traffic structure, the properties that construction products must have in relation to their essential characteristics and other requirements that construction products intended for installation in a pavement structure with concrete pavement must meet, as well as the requirements for the design, construction, usability, maintenance and removal of a pavement structure with concrete pavement and other requirements relating to a pavement structure with concrete pavement.

9. The use of concrete in road construction brings significantly lower costs during maintenance, and is also recognized as a great potential in terms of quality and speed of construction.

Insufficient regulations, i.e. insufficient specifications for the construction of concrete pavements, are partly an obstacle to their construction. Therefore, it has been determined that the real experiences of design, production, execution and control of projects carried out so far should be translated into a regulation that will ensure the use of concrete in the construction of pavement structures with concrete pavement.
