5. Technical guideline for construction TSG-N-003:2026 – Protection Against Lightning

6. Lightning Strikes Affecting Buildings

7.

8. This document is an update of an existing technical guideline, taking into account new technical standards and technological developments.

9. The technical guideline contains recommended measures to reduce the risks associated with lightning strikes to buildings, including the risk of loss of human life and damage to buildings.

9a. The technical guideline specifies the requirements laid down in Article 25 of the Construction Act (Essential and Other Requirements), which partially correspond to the basic requirements established by the EU Regulation on the marketing of construction products. The first national regulations in this area date back to the 1970s, demonstrating the need to regulate the design and construction of safe buildings. The technical guideline establishes technical measures for protection against lightning, forming part of the rules governing low-voltage electrical installations in buildings and lightning protection systems.

9b. The construction of buildings does not fall within the scope of harmonized EU legislation; the technical guideline refers to the use of European standards in the field of lightning protection and related construction materials and therefore does not constitute a restriction on the internal market.

9c. Regulation in this area is necessary to reduce the risk of death or serious injury to building occupants and persons in the surrounding environment.
