4. 2025/0176/SK - N20E - Electricity

5. Draft Decree of the Nuclear Regulatory Authority of the Slovak Republic amending Decree of the Nuclear Regulatory Authority of the Slovak Republic No 431/2011 on a quality management system, as amended

6. electric energy

7.

8. The draft Decree aims to enable permit holders to use commercial-grade items in the nuclear sector. The Decree sets out the conditions under which such items may be used, the verification system applied to them, and the safety classes for which they may be used.

9. The first reason for submitting the draft is to respond to the decline in the supply sector for nuclear components and the resulting need to source goods and services from industries outside the nuclear sector. It is therefore necessary to review the entry requirements in the field of quality management and the documentation defined by it, which the permit holder must submit at the stage prior to the purchase of new or replacement parts, the so-called 'quality plan' for selected facilities categorised in safety class III and safety class IV.

The second reason for submitting the draft is the consequences arising from the growing number of counterfeit, fraudulent, or suspicious supplies of components for nuclear installations. For these reasons, it is necessary to amend the legislation in order to limit and curb these undesirable activities to the greatest extent possible.

The third reason for the submission is the reduction of administrative burden and the simplification of the process for submitting quality requirements for recurring type replacements on the same types of facilities.

The Decree will also be subject to assessment under Articles 30 to 33 of the Treaty establishing the European Atomic Energy Community (OJ C 203/1, 7 June 2016).
