5. Gear lubricants (Valvolines) – Specifications, requirements and test methods.

6. Gear lubricants (Valvolines)

7.

8. This Decision concerns specifications, requirements and test methods for lubricants intended for the lubrication of gears and in particular the differentials and gearboxes of cars and various light or heavy-duty vehicles.

9. 1. The Directorate for Energy, Industrial and Chemical Products (DEICP) of the General Chemical State Laboratory (GCSL), in the exercise of its powers, recommends the adoption of specifications of requirements and test methods for lubricants for gears (valvolines).

2. A long time has elapsed since the adoption of the previous SCC (Supreme Chemical Council) Decision on 'Standardisation of valvolines' (SCC Decision 12/1995).

3. It is necessary to replace the previous Decision in order to adapt to technical progress. In particular, the new Decision makes explicit reference to the modern standards which define the various limits for the classification of gear lubricants (valvolines), namely SAE J306 'Automotive Driveline Lubricant Viscosity Classification' (version Feb. 2019) and SAE J2360 'Automotive Gear Lubricants for Commercial and Military Use' (version Jan. 2019). In addition, specifically for the channel point parameter, the MIL-PRF-2105E specification from which the parameter value was adopted in SCC Decision 12/1995 was repealed in 2008. In this recommendation, the value for the channel point was adopted from the specification of Armed Forces ΠΕΔ-A-00696 'Spur gear mineral oils SAE 75W – SAE 80W90 – SAE 85W140' (Version 1, 20.09.2018).

4. For the above reasons, the DEICP recommended the adoption of a draft SCC Decision which will be put out for public consultation in accordance with Presidential Decree 81/2018 (Directive (EU) 2015/1535) for a period of three months and after the assessment of any comments/remarks, it will return to the SCC, in order for the draft Ministerial Decision to be adopted, which will also be co-signed by the Ministry of Development.
