4. 2025/0779/SI - I10 - Metrology

5. Regulations on metrological requirements for electric vehicle charging equipment

6. 26.51.66 Measuring or testing instruments, devices and machines, n.e.c.

7.

8. The field of measuring systems for electric vehicle charging equipment in the Republic of Slovenia is not yet metrologically regulated. Therefore, the main objective of Regulations is to immediately establish metrological requirements for measuring systems for electric vehicle charging equipment used for electricity

billing when charging electric vehicles, the associated conformity assessment procedures and verification, thereby ensuring accurate and reliable energy billing.

The issuance of Regulations will exclusively bridge the period until the anticipated entry into force of the amended Directive (EU) 2014/32 (MID). The metrological and technical requirements for measuring systems for electric vehicle charging equipment specified in Regulations are fully aligned with the essential requirements for measuring systems for electric vehicle charging equipment proposed in the amendment to the MID.

The number of recharging points in Slovenia has increased by almost 40% over the last year. Delaying the regulation of measuring systems for electric vehicle charging equipment until the entry into force of the amended MID would result in an additional large number of metrologically uncontrolled measuring systems for electric vehicle charging equipment being in use. On the one hand, this would mean that the State does not ensure accurate and trustworthy measurements, and on the other hand, after the proposed entry into force of the amended MID, a much larger number of measuring systems would be subject to adaptation to metrological regulations than in the case of immediate regulation at the national level.

9. The Regulations lay down the metrological and technical requirements to be met by measuring systems for electric vehicle charging equipment, the method of their marking and the procedures for conformity assessment and verification and control of measuring systems for electric vehicle charging equipment in use.
