5. Regulation of the Minister for Agriculture, Fisheries, Food Security and Nature amending the Fertilisers Act Implementation Regulation in connection with the conditional authorisation of Renure beyond the application standards for animal manure

6. Renure

7.

8. Article I may contain technical regulations. The draft regulation requires that Renure may be used in excess of 170 kg N/ha/year of animal manure only if the producer is registered or if the producer has a certificate designated by the Minister for Agriculture, Fisheries, Food Security and Nature. In doing so, technical and other requirements are laid down for the equipment used to produce Renure. Requirements are also laid down for the sampling and analysis of the Renure, both in terms of content and frequency. An additional obligation applies that a declaration from the producer must always be present when Renure is transported, unless the producer has a certificate. Finally, the regulation also contains a ban on mixing Renure.

A provision of mutual recognition is not necessary because producers established outside the Netherlands may market Renure in the Netherlands if they opt for certification.

9. The technical requirements included in the draft regulation are non-discriminatory, necessary and proportionate.

The technical requirements apply first and foremost to all producers of Renure and to all equipment used to produce Renure and are therefore non-discriminatory.

The requirements are also necessary and proportionate. First of all, the requirements are laid down in order to comply with the conditions laid down in the Nitrates Directive regarding the use of Renure. To this extent, it concerns implementing legislation. In addition, for the sake of enforceability, the regulation lays down requirements to ensure that manure flows can be monitored, so that the use of animal manure can always be justified.

The compelling reason of general interest for including the technical requirements in the regulation is protection of the environment. The importance of protecting the environment and water in particular requires that the Renure produced must always meet quality standards and that the use of animal manure must always be justified. The technical regulations in the regulation provide for this, do not go beyond what is necessary and are proportionate in light of environmental interests.
