4. 2025/0351/EE - C40C - Chemical fertilisers

5. Amendment of Regulation No. 46 of the Minister of Rural Affairs of 10 August 2022 entitled 'Requirements for the composition of a fertiliser by type of fertiliser'

6. Lime fertilizers

7.

8. Row 11 of point 3 of Annex 9 to Regulation No. 46 lays down requirements for oil shale ash from ash heaps. On ash heaps, oil shale ash that has not found or will not find use is deposited. The chemical composition of oil shale ash deposited on ash heaps is similar to that of oil shale ash (Row 7 of point 3 of Annex 9 to Regulation No 46), so possible differences in moisture content and particle size are reasons why it is expedient to stipulate oil shale ash from ash heaps in Regulation No. 46 as a separate type of lime fertilizer. The requirements shall apply to oil shale ash deposited on old ash heaps.

Row 12 of point 3 of Annex 9 to Regulation No. 46 lays down requirements for the residual substance for the precipitation of calcium carbonate. Residual substance for the precipitation of calcium carbonate is a material formed from oil shale ash as a result of the precipitation of calcium carbonate.

9. The fertilizer must meet certain quality requirements in order to be safe for human and animal life and health, as well as property and the environment, when used properly.
