5. Draft Ministerial Decree approving the compendium for the sampling, measurement and analysis of water

(WAC)

6. Methods for taking samples and carrying out measurements and analyses on waste, surface, ground and drinking water in the context of various legislation

7.

8. Flemish regulations require that certain sampling, measurements and analyses of water must be carried out by accredited laboratories or may be carried out by the operator itself under certain conditions. These accredited laboratories and operators shall apply the methods set out in the compendium for the sampling, measurement and analysis of water, WAC as abbreviated.

The WAC compendium consists of six parts: methods of sampling and pre-treatment, organoleptic analysis methods, inorganic analysis methods, organic analysis methods, biological analysis methods and methods of validation.

The compendium is approved by ministerial decree.

Only the methods that are new or have changed compared to the previous notified compendium WAC (reference 2024/0554/BE) shall be notified in the attached working document. These methods are indicated in bold in the table of contents of the compendium. Amended parts are indicated in red font in the methods.

9. The methods to be applied under certain Flemish regulations for the sampling, measurements and analyses of water are laid down in a compendium. These methods are in line with European and international standards, and supplemented where necessary for the specific purpose of water regulation. The compendium is updated annually based on international developments and research, in consultation with the accredited laboratories, the relevant Flemish reference laboratory (the Flemish Institute for Technological Research [VITO]) and the competent government agency (Environment Policy Area).

The present draft Ministerial Decree updates a number of sampling, measurement and analysis methods for water and adds new methods.
