5. Ministerial decree approving the compendium of sampling and analysis methods in the context of the Manure Decree

6. Sampling and analysis methods for soil, fertilisers and feed in the context of fertiliser regulation

7.

8. Under the manure regulations in Flanders, it is mandatory in some cases to sample and analyse fertilisers, soil or animal feed.

Such sampling and analyses must be carried out by accredited laboratories and, with regard to soil sampling, by registered samplers.

The sampling and analysis methods with which they must comply are included in the compendium, which is established by this decree.

9. The compendium establishes the sampling and analysis methods that must be used by the accredited laboratories. These methods are, insofar as possible, in line with international ISO standards and, where necessary, adapted for the specific purpose intended in the context of the Manure Decree. The compendium is updated annually in response to international developments and research. This is always done in coordination with the accredited laboratories, the reference laboratory VITO and VLM-Mestbank. The draft versions for components of the compendia, which will be updated, can be consulted by the accredited laboratories at <http://emis.vito.be>.

The present draft ministerial decree fully replaces a number of methods or adds new ones. For other methods, the changes are rather limited (updates or clarifications).
