Σιδηρόπουλος, Τηλ.:210-7474028, e-mail:dkp.b@ggde.gr

4. 2025/0585/GR - B00 - CONSTRUCTION

5. Approval of the new Regulation on the preparation, contents and estimated fees of studies for the drainage of rainwater and hydraulic transport works, with mandatory application to all public works and studies.

6. Studies for the drainage of rainwater and hydraulic transport works

7.

8. The scope of this category of studies is to lay down rainwater runoff discharges for the design and control of the relevant works. It involves the investigation of meteorological conditions and surface runoff, without addressing hydrogeological issues. The Hydrology Study identifies flood discharges from all types of catchment areas, which are used in the calculation of flood protection works and hydraulic systems for rainwater and drainage.

The hydrology study referred to in this Regulation pertains to flood hydrology, excluding the determination of the probable maximum flood (or flood with an extremely high return period).

The hydrology study pertains to the following studies:

1. Flood Protection Works - Anti-erosion Works
2. Delineations
3. Internal network works (rainwater drainage)
4. Rainwater drainage along the longitudinal zone of a transport work
5. Drainage of external basins of a transport work

The above scope is also associated with Hydrological Packages 1, 2, 5 and 7 as referred to in the Ministerial Decision under Article 196(2) of Law 4412/2016 "on the specification of deliverables by stage and by study category."

9. 1. Pursuant to Article 53(8)(d) of Law 4412/2016, as currently in force: "By decision of the Minister for Infrastructure and Transport, issued following an opinion of the Technical Council for Studies of the Secretariat-General for Infrastructure and the Technical Chamber of Greece, based on the applicable technical specifications, a Regulation on Estimated Fees for Designs and Technical Services is approved...".

2. Pursuant to Article 54(8) of Law 4412/2016, as currently in force: "In particular for works contracts, by decision of the Minister for Infrastructure and Transport, specifications and regulations relating to the method of construction of the works as well as the quality, composition and processing, use and control of the construction materials used in the works may be approved. Such decision may specify whether the established specifications are mandatory in all cases, optional, or apply as minimum standards."

3. The existing specifications and regulations governing the drafting of studies date back to 1974 (Presidential Decree 696/1974 / Government Gazette A' 301 as amended by P.D. 515/89 /Government Gazette A' 219). During the time P.D. 696/74 and P.D. 515/89 have been in force, i.e. over 40 years, the advancement of science, advances in science, production know-how, and IT applications (technology) have significantly transformed all processes, timeframes and production quality for all categories of studies including hydraulic works.

4. It is imperative to upgrade the quality of studies, which serves as a guarantee for the skilful and cost-effective execution of works.

5. The first and decisive step in upgrading studies is to promote the development of modern specifications for study drafting, i.e. a modern drafting regulation, where the following are comprehensively set out: (a) Design criteria, (b) Recommended guidelines and estimated fees per study stage and category, (c) Detailed list of deliverables, (d) Their codification to facilitate correlation and retrieval, thereby streamlining the process of revisions, updates and adjustments, so that they can support a unified system for the drafting of

specifications and cost estimation of works.

6. By document no D19 under protocol no ΔΑΕΕ/οικ.1500/25-11-2015 addressed to the former Directorate for Standards and Quality of the General Secretariat for Infrastructure, its cooperation and approval was requested for drafting new hydraulic specifications, under the competence of D19, by D19. Upon completion, these specifications will be forwarded to the aforementioned Directorate for Standards and Quality for further action.

7. According to document under protocol no ΔΚΠ/1326/27-11-2015 of the former Directorate for Standards and Quality, it is deemed appropriate that the services of the Secretariat-General for Infrastructure promote the necessary actions for the development of modern specifications for Hydraulic Studies and that the modernization of the existing institutional framework is necessary. The Directorate also expressed its intention to cooperate and contribute, within the scope of its competences, to the advancement of the required actions.

8. The regulation shall be mandatory for the preparation, contents and estimated fees of studies concerning land reclamation works and water abstraction works.
