5. Rules on aircraft for research, experimental or scientific purposes

6. Aircraft

7.

8. The Rules on aircraft for research, experimental or scientific purposes are being prepared with the aim of establishing a clear, comprehensive and up-to-date normative framework for the design, manufacture,

supervision, testing, registration, use and maintenance of experimental aircraft in the Republic of Slovenia. The new Rules replace the previous regulation and harmonise national legislation with the amended European legal framework and technological developments in the field of aviation.

The new Rules provide for the possibility for a production organisation to obtain, on the basis of its proven capability, the privilege to independently validate flight conditions and issue an approval for flight testing, which the previous Rules did not allow. This will reduce the number of interim permits issued by the Civil Aviation Agency of the Republic of Slovenia (CAA) at certain stages of experimental aircraft, while ensuring an equivalent level of safety.

9. The Rules define the category of aircraft specifically designed or adapted for research, experimental or scientific purposes, as defined in point (b) of the first paragraph of Annex I to Regulation (EU) 2018/1139, laying down the conditions for the design, manufacture, inspection, testing, registration, use and maintenance of aircraft for research, experimental or scientific purposes. They establish a uniform system of requirements to ensure an acceptable level of risk and set out the responsibilities of the Agency, the roles of aviation experts and licensing procedures. The document aligns national regulation with European regulations and replaces the previous Rules, with a view to enhance safety, traceability and transparency of procedures.
