5. Draft Ministerial Decree adopting the Compendium for Sampling and Analysis (CMA)

6. Sampling and analysis methods for waste and other materials under the Materials Decree [Materialendecreet] and implementing decrees, and for soils under the Soil Decree [Bodemdecreet] and implementing decrees

7.

8. The Flemish legislation for waste and other materials as well as for soils determine when sampling and analysis must be carried out. These samples and analyses must be carried out by accredited laboratories (VLAREL). They must follow the methods set out in the Compendium for Sampling and Analysis (CMA), which is laid down by Ministerial Decree. The CMA is updated annually. Although the entire compendium is replaced each time, only a limited number of methods are newly added or changed.

The draft Ministerial Decree attached as a PDF therefore contains a table of contents identifying the new and/or changed methods in bold. The new and changed methods have also been added to the PDF file. The parts that have been changed are indicated in red.

9. The compendium establishes the required sampling and analysis methods. These methods are in line with European and international standards as far as possible; where necessary they have been adapted for the specific purpose intended as part of the waste and soil legislation. The compendium is updated annually in light of international developments and research. This is done in consultation with the accredited laboratories, the Flemish reference laboratory (VITO) and the competent administration (OVAM).

With this draft Ministerial Decree, certain sampling and analysis methods for waste, other materials and soils are updated or new methods are added.

In addition to the specific sampling and analysis methods, the compendium also contains the methods for sample pre-treatment and instructions for validation of methods as well as for data reporting.
