6. Rules and specifications laid down for the production of Grana Padano

7.

Regulation (EC) No 853/2004 on the hygiene of foodstuffs: Article 10(3) to (7)

8. The document concerns an amendment to the rules and specifications laid down for the production of Grana Padano, in particular to Article 4 of the first paragraph of the document, which is amended as follows: GRANA PADANO DOP cheese is produced from raw cow's milk from cows milked twice a day or from cows milked with free access to an automatic milking system, which respects the characteristics of the milk.

Raw milk, stored at the barn and transported, must have a temperature of no less than 8°C.

The collection of the milk must take place within 26 hours starting from the first milking at a temperature not exceeding 12°C, with the exception of a single milking collected within two hours after the end of milking.

9. The Grana Padano Protection Consortium requests a derogation from the limit set for the temperature of milk at the barn, allowing the single collection of milk within twenty-six hours from the start of the first milking at a temperature not exceeding 12°C. For technological reasons related to the manufacture of certain dairy products, where a higher temperature is necessary, in accordance with Annex III, Section IX, Chapter II, point 4(b) of Regulation (EC) No 853/2004, the competent authority may grant a specific authorisation.

The Consortium justified the request for derogation by describing the changes that the milk undergoes when treated at the refrigeration temperatures prescribed by the standard (6°C) for 26 hours in the stages preceding processing; these changes would negatively affect the cheese-making process because a population of psychrotrophic or psychophilic bacteria would be selected; for this reason, the current rules and specifications state that the temperature of the milk must not fall below 8°C during the cream rising stage, also considering that storing the milk at temperatures above 10°C appears to encourage an increase in the dairy microbiota.
