

HIGH QUALITY FOOD CERTIFICATION MARK SCHEME

HIGH QUALITY FOOD
(KMÉ)

CERTIFICATION MARK SCHEME

SPECIFIC CERTIFICATION REQUIREMENTS

Potato

Budapest, October 2025

VÉDJEGYIRODA Élelmiszerlánc-biztonsági Centrum Nonprofit Kft. (ÉLBC Kft.)
(TRADEMARK OFFICE, Food Chain Safety Center Nonprofit Ltd.)

H-1024 Budapest, Keleti Károly utca 24. | H-1525 Budapest, P.O. Box 212 | vedjegy@elbc.hu | +36 30/306
4238 | kme.hu

Potato

Applications for the High Quality Food (KMÉ) or High Quality Food Gold Grade trademark may be submitted with potato varieties which are listed in the Common Catalogue of Varieties of the European Union/National List of Varieties and the production conditions of which comply with all applicable legal requirements as well as with the marketing standards laid down in FM Decree No 34/2016 of 4 May of the Ministry of Agriculture, and which fulfil the additional criteria set out in the requirements too. Furthermore, the said varieties must be grown from the species *Solanum tuberosum* L, which is recognised in Hungary or the world market and is known to provide good quality, and they should not be intended for industrial use.

Special requirements for potatoes:

- Solanine content: not more than 100 mg/kg
- Reducing sugar content: not more than 2 %

Mandatory parameters for crop production:

Cultivation is carried out with the use of integrated production technology and biological plant protection (technological tools to prevent pests, plant protection warning systems, monitoring). Certain chemical agents and preparations may only be used with the written permission of a plant protection engineer or plant doctor.

Optional elements

Applications for the High Quality Food (KMÉ) and High Quality Food Gold Grade trademarks may be submitted for products that, in addition to the above-mentioned mandatory requirements, also comply with at least one point in each of the optional element categories of I, II and III.

I. Product characteristics

Starch content by cooking quality, specific to the variety

- | | |
|--|-----------|
| 1. 'A' salad potato: | max. 13 % |
| 2. 'B' moderately firm boiling,
for frying or roasting: | max. 16 % |
| 3. 'C' not firm boiling: | max. 18 % |

KIVÁLÓ MINŐSÉGŰ ÉLELMISZER

II. Technology

4. Non-organic crop production:

- In the production process, the applicant must have a certified quality assurance system (e.g. GlobalGAP) in place, or
- documentation for tracking, from crop cultivation to harvesting and processing. Tests under the self-monitoring scheme shall be carried out by authorised own or external laboratories with regard to the following criteria:
 - pesticide residues
 - sensory testing

5. Certified organic farming:

In the case of organic (bio) products derived from certified organic farming, a valid organic certificate issued for the producer and the applicant shall be sufficient. (not optional together with point 20)

6. Storage technology:

For refrigerated and controlled-atmosphere cold storage, the temperature, humidity, O₂ and CO₂ content should be correctly set, measured and recorded.

In the case of refrigerated storage:

temperature: 4-6 °C

humidity: 85-90 %

In the case of controlled-atmosphere storage:

O₂: 2-3 % CO₂: 1-4 %

7. Self-monitoring:

The application of methods in the production process of the product, in which the production, harvesting and storage processes (in particular, correct desiccation, ventilation and temperature) are regularly analysed in a documented manner, and the quality of the product is monitored. Based on the findings, corrective measures are put in place, good practices are identified and staff are trained accordingly.

III. Sustainability

Environmental protection (reduction of environmental footprint, green logistics)

- **Use of environment friendly, renewable energy resources**

8. The holding/applicant derives part of its energy from renewable energy sources (e.g. thermal water, geothermal heat, solar panels, biogas) in the production and preparation process.

(The undertaking has a certified green product, green service, or sells green energy (solar energy, wind energy, hydropower, biogas, geothermal energy).

Document to demonstrate the distribution of total and renewable electricity consumption in the last financial year).

- **Use of sustainable management inputs/technological methods**

9. More efficient resource management, material, energy and water management, and modernisation of processing technologies that reduce environmental impact (for example regenerative heat recovery, waste heat recovery, the improvement of the efficiency of the refrigeration systems and the reduction of energy consumption).

(It shall be demonstrated:

- *whether it has environmental compliance/certification*
- *whether it uses a qualified green product or service for its operation.*

It has a process in place to identify, assess and respond to environmental and social risks and opportunities.

It is necessary to examine what proportion of the materials used by the undertaking or by the undertakings in its value chains are recycled, reclaimed, renewable and non-renewable raw materials /circular economy/.)

10. Energy recovery system on production machines.

(For example, the use of any equipment that captures and transmits the waste heat of the compressor. Recycling of thermal energy for other industrial processes that require heat or steam).

11. Application of an Environmental Management System (EMS) or EMAS (Eco-Management and Audit Scheme) in accordance with standard MSZ EN ISO 14001:2015, certifying environmental compliance.

(Preparation of annual reports which provide information about the energy use, waste management, water use and other environmental impacts.)

12. Certified and regularly used environmentally friendly and/or water-saving cleaning products and detergents.

(Certifications, safety data sheets, specifications, trademarks on the packaging. Certificates from certification bodies, e.g. Ecocert, Green Certification, Breeam, Leed.)

13. Utilization of by-products, minimisation of product and material losses.

(The undertaking has a process in place to identify, assess and respond to environmental and social risks and opportunities. The undertaking uses raw materials, secondary raw materials produced from waste in accordance with circular economy principles, and the circular economy requirements are taken into account in the design of the product, including the packaging of the product.)

14. Operation of an environmentally sound waste management system. Separate waste collection and recycling, in a documented form.

(The undertaking is authorised to handle, collect, transport, store and dispose of persistent organic pollutants in a non-polluting way once they become waste.)

15. Efficient and environmentally friendly waste water treatment technology (e.g. biological waste water treatment).

16. Verified decrease in specific water use.

(E.g. use of run-off hot water from installations for secondary cleaning tasks, drip irrigation, rainwater collection and recycling, grey water recycling.)

- **Green rating**

17. Official proof of a recognised, certified sustainability rating in accordance with the EU legislation in force (e.g., but not limited to: EcoVadis, B Corp, BREEAM, LEED, ISCC).

18. Green sourcing policy, documented: prioritising suppliers that have made sustainability investments.

(The undertaking makes its suppliers carry out an environmental assessment of the products and/or services. Demonstration of the proportion in which suppliers use, for example, renewable energy sources, whether they take into account the building energy aspects, whether they operate an environmentally sound waste system, minimise the environmental impact of the logistics network and that of transport.)

19. The undertaking has a Science Based Target Initiative (SPTI) commitment.

20. The raw material used in the production of the product comes from certified organic or extensive farming or has a reduced environmental footprint for which there is other scientific evidence. (not optional together with point 5)

(E.g. products labelled as organic, environmentally friendly product or service.)

- **Use of eco-friendly packaging solutions**

21. Application of an eco-friendly packaging solution for packaged products (reduced packaging size or alternative packaging materials e.g. compostable (FSC or PEFC logo)).

22. Suppliers of primary packaging material that comes into contact with the product shall have BRC or IFS PACsecure certification.

- **Transport**

23. The main component comes to the processing plant from own holding or from within 100 km.

(Place of production, the production and/or processing site may be located within a distance of 100 km.)

24. Plant protection products, materials that improve or maintain the fertility of the soil shall be manufactured and transferred to the production site from within 100 km.

25. Transport optimisation, route planning to reduce emissions.

(Lean & Green program)

26. The product shall be delivered to the consumer within a short supply chain.

Social aspects

27. Existence of SMETA (Supplier Ethical Data Exchange) audit.

28. Prevention of food waste through donation.

29. Prevention of food waste by preventing waste generation in production and logistics.
